

# CONVERSION CHART

The difference between measuring cups and spoons varies slightly from country to country. I use Australian spoon measures in this book and all measurements are level. One North American measuring cup holds 240 ml. One Australian metric measuring cup holds 250 ml, one Australian metric tablespoon holds 20 ml and one Australian teaspoon holds 5 ml. North America, New Zealand and the United Kingdom use a 15 ml tablespoon. Oven temperatures in this book are for fan-forced ovens. If you use a conventional oven, increase the temperature by about 25°C (or by 45°F, if applicable).
